Service Information Bulletin

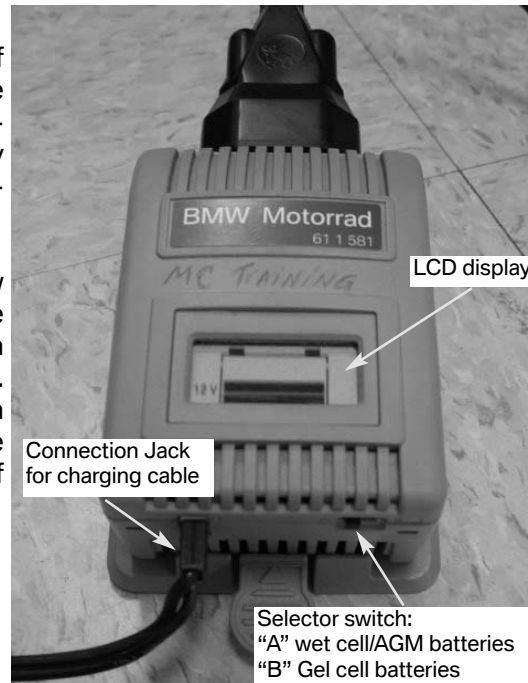

Subject: **BMW Motorrad Battery Charger and Tester - Required charger when programming with CIP.**

Details The latest battery charger from BMW Motorrad is now available. The new charger is capable of charging wet cell batteries, Gel batteries and AGM batteries. However, the correct charge setting must be selected depending on the type of battery being charged.

The new charger is capable of charging the battery through the accessory socket on all motorcycles, including the New Technology Motorcycles with CAN bus electrical system.

In addition to charging, this new device has the ability to test the battery and electrical system on motorcycles fitted with CAN bus. The charger has three tests it can conduct: **1.** starting ability of the battery, **2.** generator test, **3.** off load voltage test.

Read the operating instructions completely before using the new charger.

Part number: 90 88 6 611 590

Important Note: This is the required battery charger to be used while programming with CIP. Always remember the following when using CIP:

- Always start with a fully charged battery
- Always connect the charger directly to the battery; do not connect through the accessory socket.

Distribution: The battery charger and tester is being shipped as part of the automatic tool shipment program.

Contact: Respective Field Service Engineer
