Re: "Solo"-type suspension units on the two-cylinder models

Dear Sirs,

On general request of public authorities and private customers a new "Solo" type bearing spring with increased end pressure,

Part No. 20 54 007,

has been developed for the front suspension units.

The installation on the assembly line commenced with the following frame numbers:

637 018 (R 50)

626 401 (R 60)

658 929 (R 69 S).

We would ask you to ensure that in repair cases bearing springs of the same type are installed on the suspension units.

With friendly greetings

BAYERISCHE MOTOREN WERKE
Aktiengesellschaft
