BMN Exhaust Gas Analysis Forms - MCS-062

There are many benefits to checking and adjusting the exhaust gas output of a motorcycle, including better overall performance, reduced engine vibration, improved fuel economy and reduced environmental pollution.

To assist you in promoting the benefits of regular exhaust gas analysis (EGA) checks, we have produced a form which can be given to motorcycle owners. This form also serves the purpose of "validating" the process of analyzing the exhaust gas, since the owner leaves the dealership with a copy of the results, knowing how his/her motorcycle is performing at idle speed. This form is to be attached to the customer copy of the repair order when no print-out is available from your EGA machine (a print-out is the best source document). When an EGA is used for diagnostic purposes under warranty, a copy of the print-out (or this form) must be attached to the hard copy of the repair order (kept in the vehicle history file) and one copy submitted with the warranty claim.
