Circular-Letter of the Service Department
Motorcycles: Carburettor Group No. 1e/53

Munich, 30/6/53
KVK/Ba/Wi.

Dear Sirs,

Subject: R 25/2 SAWE carburettor

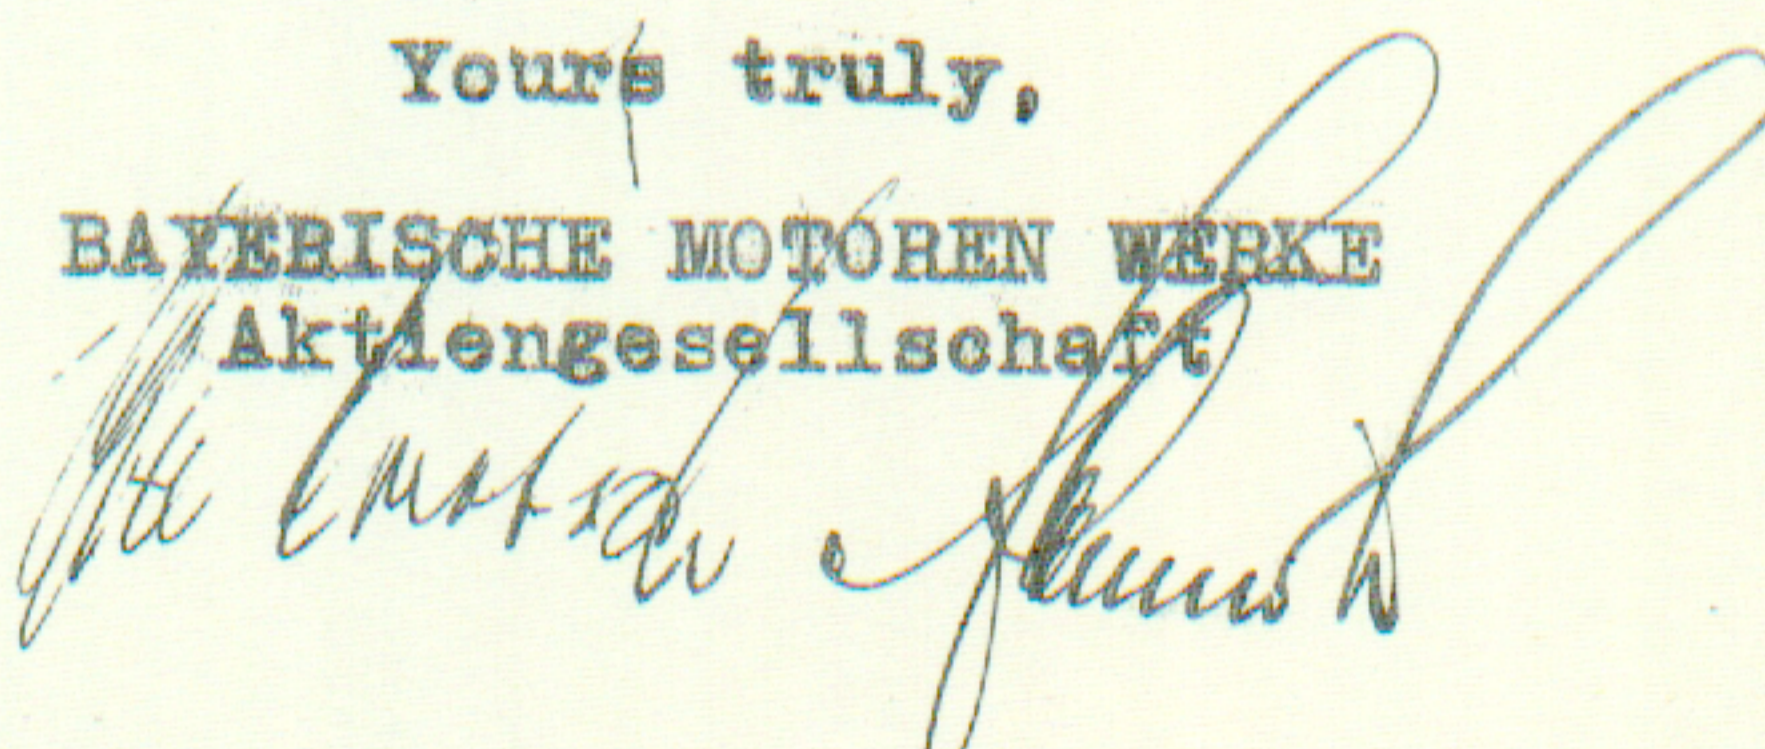

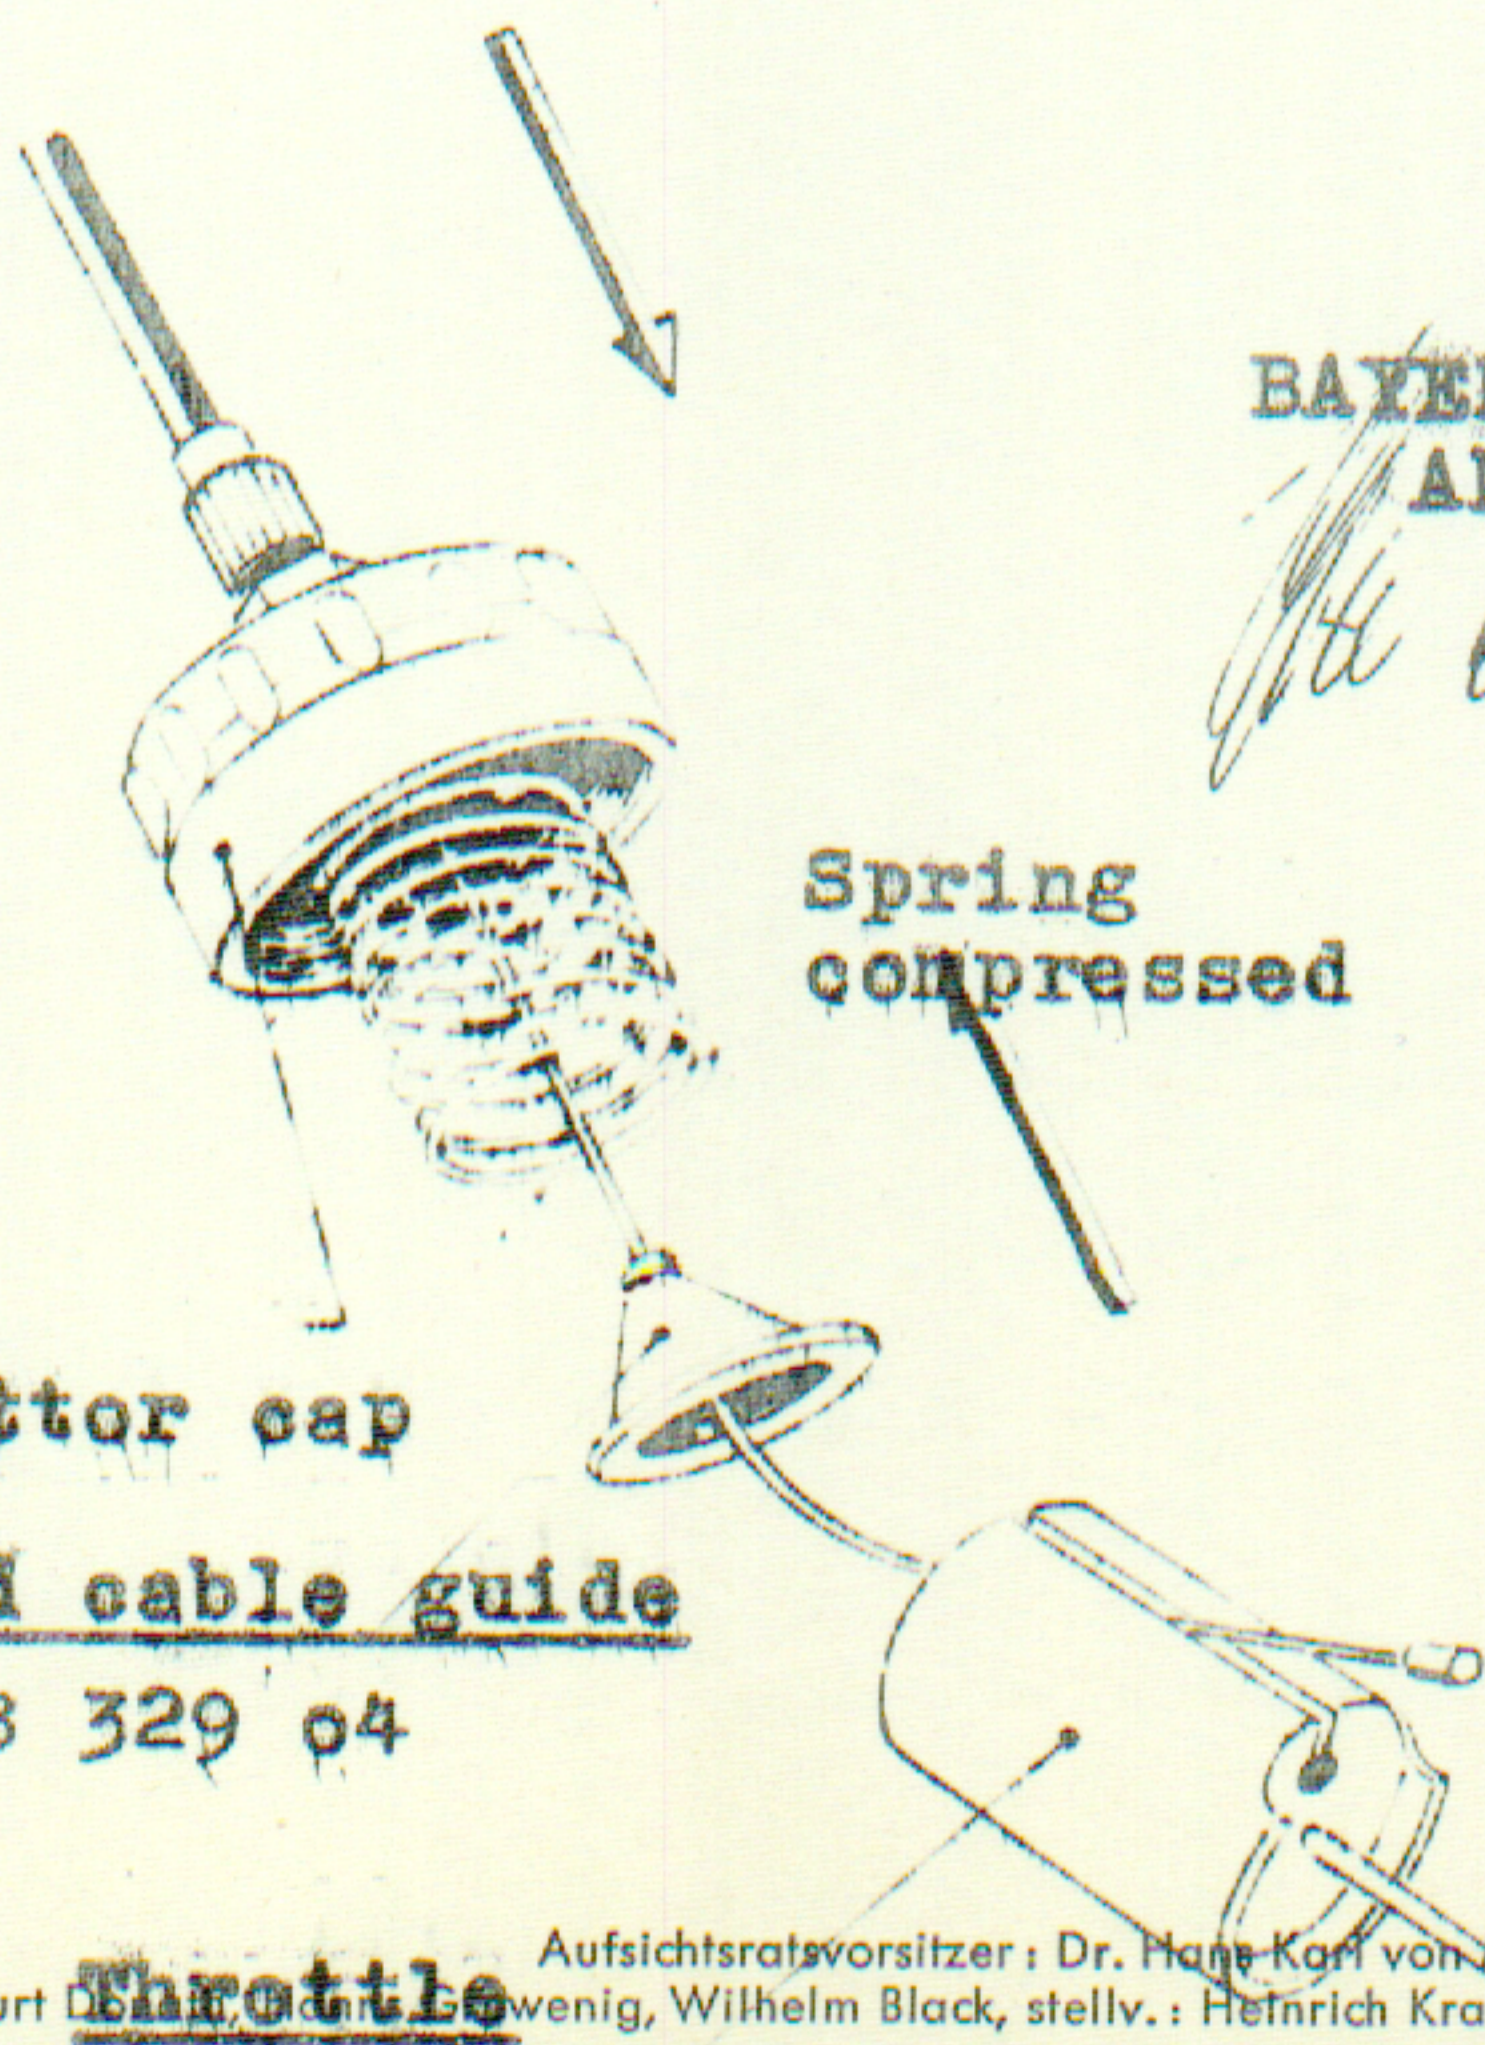

In order to prevent the throttle from being jammed due to a diagonal action of the Bowden cable, we have developed a bevelled cable guide 224 3 08 329 04, which we recommend to fit in every SAWE carburettor on already supplied machines. As per the figure inserted hereunder, this cable guide is pushed upon the cable and inserted between spring and throttle top end, so that it centralizes the cable.

These cable guides are available through our spare parts department at a price of DM 0,40, per unit.

In case of a jamming throttle we suggest besides to check the air cleaner for dryness and dirt, the cap nut for excessive tightness and consequent contraction of cable travelling path and the throttle skirt for burring formation caused by the throttle stop screw.

Yours truly,

BAYERISCHE MOTOREN WERKE
Aktiengesellschaft
